What is Narcan?

Naloxone (Narcan) is a medication approved by the Food and Drug Administration (FDA) and designed to reverse opioid overdose rapidly. It is an opioid antagonist—meaning that it binds to opioid receptors and can reverse and block the effects of other opioids, such as heroin, morphine, and oxycodone.

IF THERE IS NOT ANY NARCAN LEFT AT THE DISPLAY, PLEASE CALL 217-549-8772 OR 217-549-7654.

IF YOU WOULD LIKE AN IN-PERSON TRAINING OR HAVE ANY QUESTIONS ABOUT NARCAN PLEASE CONTACT THE NUMBERS ABOVE.
