 - iii. 15.38% One Week
 - iv. 3.85% Same Day

Recovery Oriented System of Care

- g. For a more complete look at our survey results, please be on the lookout on Facebook!

II. Discussion about Survey Results

- a. It is interesting that respondents said that Substance Use was sometimes a medical issue.
We did not get to ask the respondents why they choose their answers, but this leads to needing to educate the population more about substance use.
- b. It is interesting that people chose “friends” as the leading person that people get substances from over “drug dealers.”
 - i. Perhaps these are the same people.
- c. All respondents answered that they could obtain substances in under a few days.
However, the majority of respondents said that it old be more than a week to access treatment.

III. Next Meeting on April 11, 2024 at 11:30AM!
